

XXIVth EUCARPIA Maize and Sorghum Conference

Integrating quantitative and molecular genetics to develop new breeding methods in maize and sorghum

October 7 – 9, 2019

TUM School of Life Sciences Weihenstephan, Freising, Germany

We are pleased to invite you to attend the XXIVth EUCARPIA Maize and Sorghum Conference.

Research and development in plant breeding has supreme relevance for securing yield and yield stability in agricultural production. We bring together molecular, quantitative and computational expertise to learn about the latest developments in maize and sorghum breeding and discuss future research needs. With the new technologies plant breeding has become more exciting and dynamic than ever, so please follow our invitation and join us in October this year.

Alain Charcosset: Chair of the EUCARPIA Maize and Sorghum Section

Chris-Carolin Schön: Chair of the Scientific Committee

The call for abstracts and registration will follow in May 2019.

The conference will precede the TAST2019 symposium (“Towards Abiotic Stress Tolerance”; www.TAST2019.wzw.tum.de), to be held at the same venue October 10, 2019 as part of the Plant Sciences Symposia Series.

Confirmed speakers:

Gustavo de los Campos, Michigan State University

Mathieu Falque, INRA

Caroline Gutjahr, Technical University of Munich

Frank Hochholdinger, University of Bonn

Matthew Hufford, Iowa State University

Christina Lehermeier, RAGT

Aaron Lorenz, University of Minnesota

Emma Mace, University of Queensland

Albrecht Melchinger, University of Hohenheim

Emilie Millet, Wageningen University

Laurence Moreau, INRA

Pedro Revilla, CSIC

Cinta Romay, Cornell University

David Pot, CIRAD

Michelle Stitzer, UC Davis
